(1) As reported in The Andersons 2025 Summary Annual Report on Form 10-K for 2025 data. See our SEC filings on our company website for more information.

(2) Restated to clarify the previous data that excluded biogenic emissions. All emission data excludes Skyland unless otherwise stated. Scope 2 Location-based method reflects the physical reality of the electricity flowing into our facilities. Energy usage is calculated by multiplying kilowatt-hours by a grid-average emission factor. Scope 2 Market-Based method reflects our usage including renewable energy credits (RECs) which applies an emission factor of zero for that electricity specific to the REC.

(3) Skyland Emissions data from operations that tracked electricity, natural gas and fuel usage. Data was not available from all facilities in 2025. The Andersons, Inc. will continue to gather to ensure all facilities are captured. Skyland will be communicated separately from The Andersons, Inc. due to the nature of data availability.

(4) Restated to clarify the previous data that excluded biogenic emissions. Direct (Scope 1) emissions occur from owned/operated facilities. Emissions subject to regulatory reporting requirements through 40 CFR Part 98 Mandatory Greenhouse Gas Reporting were calculated using regulatory methodology. Emissions not subject to regulatory reporting were calculated in accordance with the GHG Protocol Corporate Standard. Scope 1 third party verification is limited to emissions from natural gas. Skyland natural gas usage will be separately stated outside of The Andersons, Inc. totals.

(5) Biogenic CO₂ emissions resulting from our ethanol facilities fermentation process are reported separately per GHG Protocol and GRI Standards (GRI 305-1).

(6) Location-based Indirect (Scope 2) emissions related to emissions from the generation of purchased electricity, steam or heat consumed by the organization.

(7) Market-based (Scope 2) emissions related to our usage including renewable energy credits (RECs), which applies an emission factor of zero for that electricity specific to the REC from the generation of purchased electricity, steam or heat consumed by the organization.

(8) Scope 3 emissions reported for Category 6, include corporate air, car rental and hotel travel, as The Andersons is still refining our value chain scope 3 reporting and data.

(9) At some of our ethanol facilities, a portion of the fermentation process CO₂ is captured and exported for commercial application (dry ice). The CO₂ captured and sold are biogenic emissions and are therefore reported separately from our direct Scope 1 emissions.

(4) Restated to clarify the previous data that excluded biogenic emissions. Direct (Scope 1) emissions occur from owned/operated facilities. Emissions subject to regulatory reporting requirements through 40 CFR Part 98 Mandatory Greenhouse Gas Reporting were calculated using regulatory methodology. Emissions not subject to regulatory reporting were calculated in accordance with the GHG Protocol Corporate Standard. Scope 1 third party verification is limited to emissions from natural gas. Skyland natural gas usage will be seperately stated outside of The Andersons, Inc. totals.

(10) Includes natural gas, fuel and electricity use at our facilities.

(11) Water calculations were performed in accordance with GRI Standards (GRI 303). Water discharge is the sum of effluents (treated or untreated wastewater), used water, unused water released to surface water, ground water or third party for which we do not have any further use. This could include land application or recycled. Water discharge data is not at 100% and only includes a small percentage of facilities. Water withdrawal is the sum of all water drawn from surface water, groundwater or third party for any use over the course of the reporting period. Many facilities withdrawal from groundwater and do not have meters to accurately capture the data. Estimates have been made for these facilities where feasible using the EPA water usage method based off of employee head count. The Andersons will continue to refine their water withdrawal information each year as more data is captured and recorded.

	White	%	-	405-1	81.6	87.5	83.5

(12) Waste metrics were classified in accordance with GRI Standards (GRI 306). Waste classification defined in accordance with U.S. EPA 49 CFR Part 260-261. Company-wide waste data in 2025 was more complete with almost 99% reporting compared to 2023 with 80% complete and 98% complete in 2024. Total waste diverted from disposal includes nonhazardous biosolids from plant nutrient sites that is recycled for use as plant fertilizer. In office environments where weight of waste information is not available, The Andersons relies on estimated volumes converted to weight utilizing Volume-to-Weight Conversion Factors, U.S. Environmental Protection Agency, Office of Resource Conservation and Recovery, April 2016.

(13) Social data was compiled using EEO-1 data for United States employees. Excludes Skyland employee information.
